Tutorial 9 - *How to Make a Good Demo Video*

Cherie Sew
cherie.sew@unimelb.edu.au

Reminder

- A3 Video due: 11:59pm, 18th October
- 3-minute video (uploaded on YouTube) → 5/55 pts
- Explain your system and demonstrate its main functionalities.
- You do NOT need to implement ALL features, but should be able to provide an overview.
- Should be accessible via a link – which is all you need to submit.

Reminder

Assignment 3 (Video Submission)

Published | Edit

A 3-minute video demo (uploaded to Youtube) where you should explain your system and demo its functionality. Note, that at this stage you do not need to have implemented all the features, but should be able to provide an overview of your system. You can set the video to unlisted if you wish to prevent it from being viewed publicly, but please ensure that we can access it from the provided link without requiring any special permissions.

Ensure that you **do not** toggle the "Made for Kids" option, as this will prevent us from being able to save the videos into a playlist to show in the final two lectures. A video showing how to ensure that your demo is not set as "Made for kids" can be found below:

https://www.youtube.com/watch?v=0AzyGGpWE00

Outline

- *Pre-production:* Planning the video (research, storyboarding, logistics)
- *Production*: Recording (actual filming)
- *Post-production:* Editing (cutting, mixing with sound)

Plan your video

- Preparation is key!
- Do not try to explain everything (3 min video)
- Create a story/**narrative** - very important (makes filming and editing much easier and organised)
  - draft a storyboard first, each panel could be acted out
- Focus on the **problem** + a quick intro of the **solution**
- Allocate more time for **unique** and **important** features

https://www.youtube.com/watch?v=GC2qk2X3fKA

Plan your ~~video~~ logistics

- Location hunting – will you record in the app's context of use?
- Actor recruitment – group members, additional people?
- Gather your equipment – camera, microphones, phones, props?

https://www.youtube.com/watch?v=JrxtWQ-dIiU

Recording

- It is impossible to record the whole video in a single attempt
- Create short clips, and have a few versions of each scene
  - sometimes different angles of the same scene help explaining a situation better (e.g., smartphone screen + happy face of user)

Screen Recording

- Showing your high-fid mockups **in action**
- Ensure gestures/mouse movements are visible and **not too fast** – so we can see what's being clicked & when
- If you say *"We can fix this in post-production"* → film the scene again! (post-production can't fix everything, sometimes it is much easier to re-record)

Voiceover

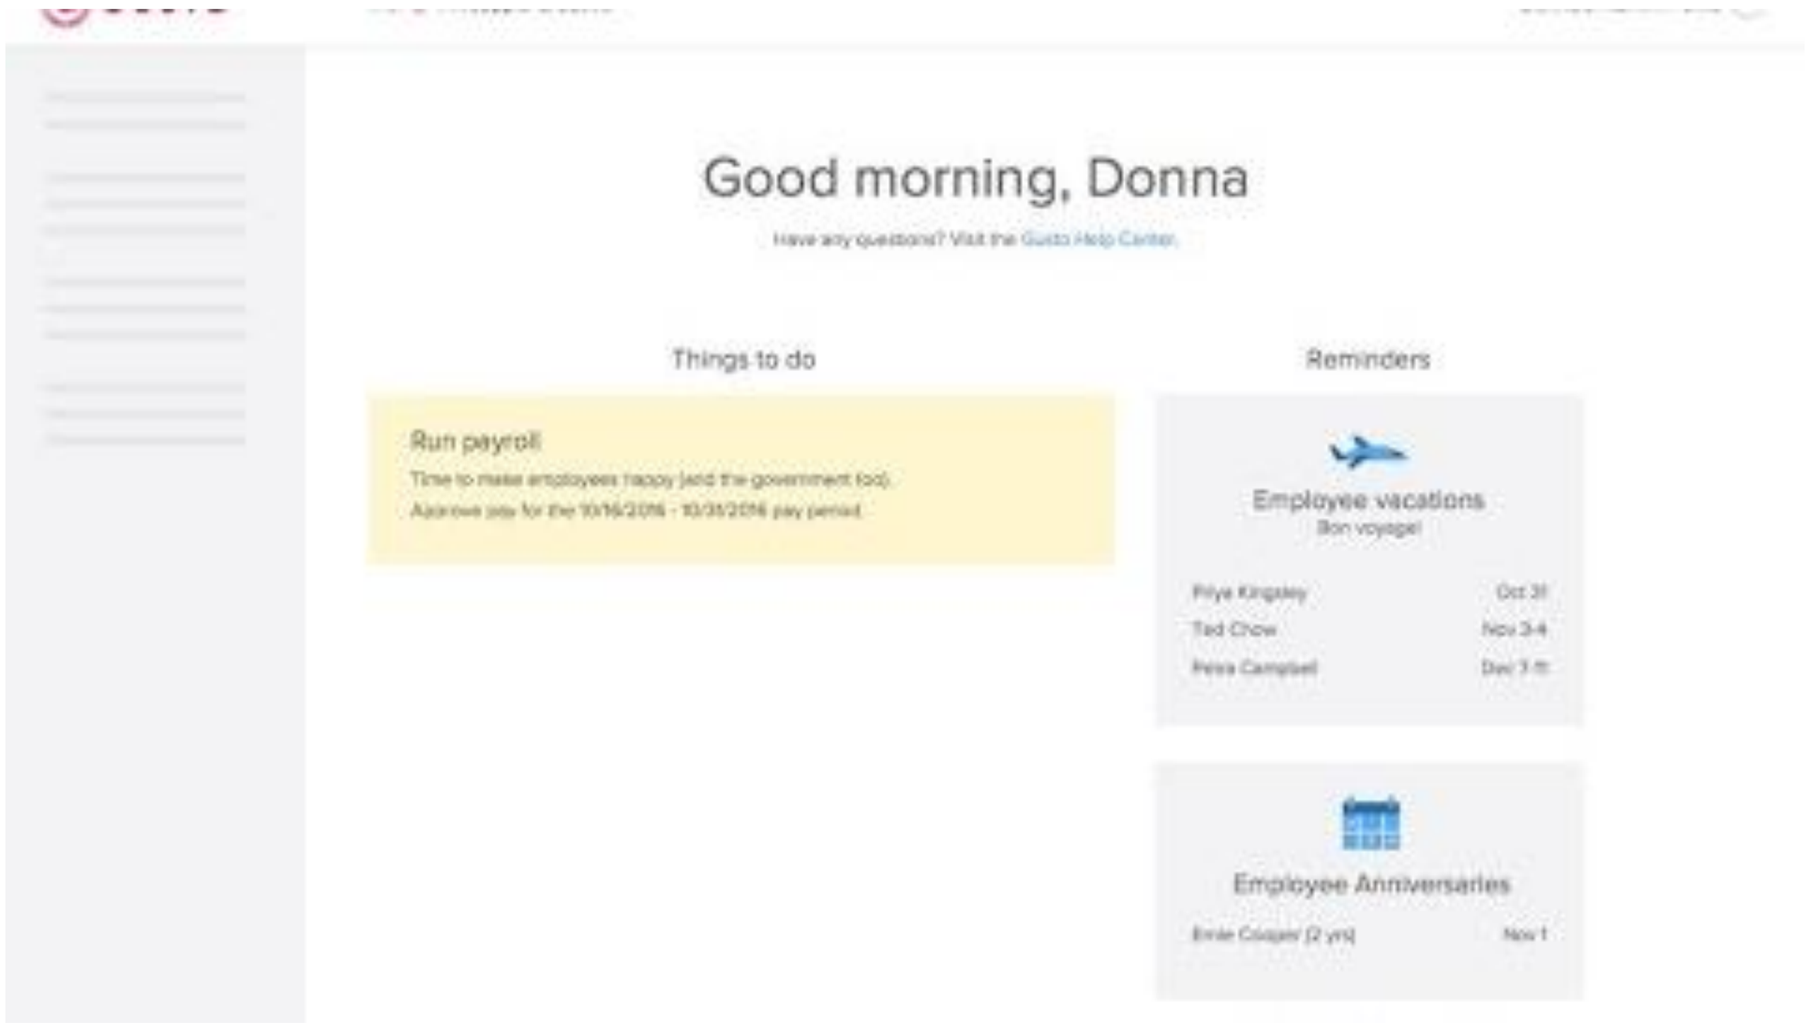

- Quality of the microphone matters **a lot** – see which group member has an external mic or the best phone mic
- Ensure you record in a **quiet area**
- Create a **script** and practice until you get it right
- Please use your own voices, not an AI voice.
- Add captions to your video

Editing

- Start with a rough cut (longer than the final video)
- Put screen and voice recordings together
- Once the sound and voiceovers sync – shorten video clips to keep only the required content
- Use custom text elements and **graphics** to grab attention
- Use music or sound clips – be careful about the **volume** of sound clips, they should not overpower the voiceover
- **Timing** is important. Pace it well, don’t rush it
- Get feedback and perfect your video
